

SICO Gulf Equity Fund

Fact Sheet - June 30, 2010

NAV US\$93.09 ↓ 3.0%

Manager's Commentary

After a short respite during the first half of the month, international capital markets once again experienced high volatility towards the end of June. Announcements by various European governments regarding their intention to curb deficit spending triggered declines in the markets worldwide. Furthermore, lower than expected US Jobs data aggravated the prevailing negative sentiment. Consequently, all GCC markets with the exception of Qatar posted negative returns for the month.

SICO Gulf Equity Fund's NAV declined by 3.0% for the month compared to a 1.4% drop in its benchmark. The benchmark primarily benefited from an extraordinary dividend payout by Zain, to which we do not have exposure to. Zain's dividend alone contributed over 2% to the monthly return of the index. On a year to date basis, the fund is under performing and is down 6.5%, versus a 0.5% increase in benchmark. The underperformance has mainly come due to our underweight position in Kuwait equities. Kuwait has been the best performing GCC market this year with over 50% weight in fund's benchmark. Within Kuwait, the main contributor has once again been Zain. The stock has appreciated 26.3% during the year, contributing over 5% to the benchmark's return. Despite this, we have a negative view on the stock and believe that this appreciation has come due to speculation rather than an improvement in its fundamentals. Zain is currently the most expensive regional telecom company and trades at over 50% premium over its peers such as Q Tel, STC, Etisalat and Batelco on almost all valuation measures.

As the regional markets have entered the summer season, volumes have significantly dried up. The upcoming second quarter earnings announcements would be critical in determining the market returns in the short term. On a medium to long term horizon, we believe the regional markets continue to offer good upside potential. We would continue to move away from the non-core / high beta stocks to companies that have good medium to long term prospects.
