

SICO Gulf Equity Fund

Fact Sheet - May 31, 2010

NAV US\$95.93 ↓10.8%

Manager's Commentary

Global markets exhibited high volatility during May as a combination of factors weighted on investors minds. Europe's sovereign debt concerns along with fears of a slowdown in the global economy resulted in a sharp decline in the markets. In addition, tightening measures by China along with the Korean debacle also added to investors' concerns. Consequently, the major world markets lost 10-15% of their market values. The GCC markets mirrored the global trend with Saudi Arabia being the worst performing market (-10.9% on the back of a sharp drop in oil prices). Qatar and Dubai also lost around 10%, while the rest of the markets lost between 6-9%.

The NAV of SICO Gulf Equity Fund declined by 10.8% for the month as compared to a decline of 9.8% for the benchmark. The fund has underperformed the benchmark since the start of the year. We attribute this to our low exposure to the Kuwait market that has performed reasonably well this year and more specifically, having no / little exposure to Zain, which comprises of one-fifth of the benchmark. Zain has remained strong due to the proposed sale of its African assets and speculative shareholder base. Kindly note, that we reiterate our negative view on the Kuwaiti market as well as Zain. Now that Zain has sold most of its African operations, we are convinced that the stock would re-rate downwards to its fundamental value as Zain excluding most of its African assets offers very little growth prospects.

The sharp selloff in regional equities has been exaggerated in our view as the region's macroeconomic situation remains intact. The current market valuations along with strong corporate earnings growth should act as triggers for the gulf bourses.
